                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seq

Its amine acid CC sequence was deduced from a CDNA clone (see AANO0230) obtained CC from a Dr salivary gland cDNA library. 3 Novel VASPs, designated CC FS-HBP1, FS-HBP2 and MS-HBP1 (see AAN3746-48), of the tick Rhipicephalus appendiculatus have also been identified. The CC vABPs can be expressed in host cells using e.g. a baculovirus of the vascast of the control of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence is an example of a histamine or serotonin binding compound (A), of the invention. The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies (e.g. type I hypersensitivity reactions, urticaria, asthma, allergic rhinitis (hay fever), atopic dermatitis, insect bites and food and drug allergies, abnormal blood pressure, migraine, psychological disorders, respiratory disease, and coronary heart disease). Histamine may also be used as components of vaccines directed against blood-sucking

                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence is an example of a histamine or serotonin binding compound (A), of the invention. cDNA encoding this sequence was isolated from a mixed Boophilus microplus/Ixodes hexagonus cDNA expression library. The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies (e.g. type I hypersensitivity reactions, urticaria, asthma, allergies rhinitis (hay fever), atopic dermatitis, insect bites and food and drug allergies, abnormal blood pressure, migraine, psychological disorders, respiratory disease, and coronary heart disease). Histamine may also be used to regulate cellular vaccines directed against blood-sucking ectoparasites.

                                                                                                                                                                                                                                                                                                                                                                                          This sequence is an example of a histamine or serotonin binding compound (A), of the invention. cDNA encoding this sequence was isolated from a mixed Boophilus microplus/Ixodes hexagonus cDNA expression library. The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies (e.g. type I hypersensitivity reactions, urticaria, asthma, allergic rinhitis (hay fever), atopic dermatitis, insect bites and food and drug allergies, abnormal blood pressure, migraine, psychological disorders, respiratory disease, and coronary heart disease). Histamine may also be used to regulate cellular growth and tissue repair. The molecules may also be used as components of vaccines directed against blood-sucking ectoparasites.

                                                                        from a salivary gland cDNA library. FS-HSP1 (see AAW37446) and male-specific HSP1 (see AAW37446) and a related protein, D.RET6 (see CAW37449) from Dermacenter reticularis, were also identified. These convel vasoactive amine binding proteins (VABPs) can be expressed in host cells using e.g. a baculovirus expression system. They can be used: (i) to assay histamine (or other VA such as serotonin) in body fluids or cell culture supernatants, e.g. to monitor the effect of allergens; (ii) for binding VA, e.g. to remove histamine or anti-inflammatory agents, e.g. for treating insect, snake or scorpion bites or dermatitis, or as a carrier for slow release of histamine-related compounds; (iv) in vaccines to protect against metazoan parasites, especially in animals; (v) as reagents for the studying inflammation, involvement of VA in ulcer formation or the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                     This sequence is an example of a histamine or serotonin binding compound (A), of the invention. The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies (e.g. type I hypersensitivity reactions, urticaria, asthma, allergic rhinitis (hay fever), atopic dermatitis, insect bites and food and drug allergies, abnormal blood pressure, migraine, psychological disorders, respiratory disease, and coronary heart disease). Histamine may also be used to regulate cellular growth and tissue repair. The molecules may also be used as components of vaccines directed against blood-sucking
                                                                                                                                                                                                                                                                                             Histamine and serotonin binding of allergies

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                            This sequence is an example of a histamine or serotonin binding compound (A), of the invention. The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies (e.g. type I hypersensitivity reactions, urticaria, asthma, allergic rhinitis (hay fever), atopic dermatitis, insect bites and food and drug allergies, abnormal blood pressure, migraine, psychological disorders, respiratory disease, and coronary heart disease). Histamine may also be used as components of vaccines directed against blood-sucking

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a method for treating or preventing allergic rhinitis. The method involves employing a blood-feeding ectoparasite-derived (e.g. tick-derived) histocalin protein. The present sequence is one such histocalin protein. The histocalin protein, is useful for treating or preventing allergic rhinitis, both seasonal and perennial allergic conjunctivitis.

                                                                                                                                                                                                                        This protein comprises tick Rhipicephalus appendiculatus (Ra) novel CC male-specific histamine binding protein (MS-HBP1). Its amino CC acid sequence was deduced from a cDNA clone (see AAV0027) obtained CC from a salivary gland cDNA library. Female-specific HSP1 and CC HSP2 (see AAW37446-47) and a related protein, D.RET6 (see AAW37449) CC from Dermacenter reticularis, were also identified. These novel CC bost cells using e.g. a baculovirus expression system. They can be used: (i) to assay histamine (or other VA such as serotonin) in CC bedy fluids or cell culture supernatants, e.g. to monitor the ceffect of allergens; (ii) for binding VA, e.g. to remove histamine or cc from blood, food, cell cultures etc.; (iii) as an antihistamine or cc anti-inflammatory agents, e.g. for treating insect, snake or scorpion bites or dermatitis, or as a carrier for slow release of histamine-related compounds; (iv) in vaccines to protect against commune response etc. VABPs provide a more sensitive assay for histamine than low-affinity antibodies currently used. They may compared the componed of the component of VA in ulcer formation or the listamine than low-affinity antibodies currently used. They may compared the component of the

                                                                                                                                                                                                                                                                                                                       This sequence is an example of a histamine or serotonin binding compound (A), of the invention. The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine or serotonin (in animals, plants, cell cultures, food materials, or humans) and in the treatment of various diseases and allergies (e.g. type I hypersensitivity reactions, urticaria, asthma, allergic rhinitis (hay fever), atopic dermatitis, insect bites and food and drug allergies, abnormal blood pressure, migraine, psychological disorders, respiratory disease, and coronary heart disease). Histamine may also be used as components of vaccines directed against blood-sucking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Histamine binding protein; serotonin binding compound; inflammation; gastric acid secretion; allergy; type I hypersensitivity reaction; asthma; urticaria; allergic rhinitis; atopic dermatitis; food allergy; drug allergy; abnormal blood pressure; psychological disorder; vaccine; respiratory disease; coronary heart disease; cellular growth regulator; tissue repair; blood-sucking ectoparasite; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Histamine and serotonin binding compounds useful of allergies

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3
```

This protein comprises tick Rhipicephalus appendiculatus (Ra) novel female-specific histamine binding protein 1 (FS-HBP1). Its amino acid sequence was deduced from a cDNA clone (see AAV0227) obtained from a salivary gland cDNA library. FS-HSP2 and male-specific thispalling from a salivary gland cDNA library. FS-HSP2 and male-specific thispalling from a salivary gland cDNA library. FS-HSP2 and male-specific thispalling from between the first protein, D.RETG (see AAW37449) and a related protein, D.RETG (see AAW37449) from Dermacenter reticularis, were also identified. These novel vasoactive amine binding proteins (VABPs) can be expressed in host cells using e.g. a baculovirus expression system. They can be used: (i) to assay histamine (or other VA such as serotonin) in body fluids or cell culture supernatants, e.g. to monitor the effect of allergens; (ii) for binding VA, e.g. to remove histamine or anti-inflammatory agents, e.g. for treating insect, snake or canti-inflammatory agents, e.g. for treating insect, snake or securious proteins of the complex proteins of the com

This sequence is an example of a histamine or serotonin binding compound (\lambda), of the invention. The compounds are useful for regulating the action of histamine and serotonin (in e.g. inflammation and gastric acid secretion), the detection, quantification and removal of histamine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  drug and lergy; abnormary coronary disease; coronary

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   immune response etc. VABPs provide a more sensitive assay for histamine than low-affinity antibodies currently used. They may also be more effective and safer than conventional antihistamines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 studying

                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for treating or preventing allergic rhinitis. The method involves employing a blood-feeding ectoparasite-derived (e.g. tick-derived) instructain protein. The present sequence is one such histacalin protein. The histacalin protein, is useful for treating or preventing allergic rhinitis, both seasonal and perennial allergic conjunctivitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of histacalin proteins for treating or preventing allergic rhinitis, or for manufacturing a medicament for treating or preventing allergic rhinitis, e.g. seasonal or perennial allergic rhinitis
                                                                                                                                                                                                                                                                                                     Sequence
